# Lepide User Behavior Analytics

## Benefits

Audit, monitor and alert on how your users and entities are interacting with your critical data (copying/moving/modifying) and spot trends so that you can quickly react to potential threats.

### **Know Your Users**

Spot hackers and insider threats amongst your users by being able to search through and analyze the key activities and metadata of your users across potentially enormous volumes of data.

### **Spot Deviations From the Norm**

Determine what normal behavior looks like and automatically detect and alert on when anomalous user activity takes place.

### **Real Time Alerts**

Track activities across huge environments in real time so that you can make informed decisions to ensure the security of your data.

## Key Features

### Monitor Data Interactions

See how your users are interacting with your sensitive data so that you can determine whether your users are insider threats.

### Detect Potential Anomalies

Improve threat detection by spotting interactions and system state changes that deviate from normal user behavior automatically.

### React to Anomalies

Get immediate real time alerts when users make changes that deviate from their normal user behavior to react quicker to potentially damaging changes.

### Track All Access Attempts

Determine which users are attempting to access your critical data/systems so that you can spot excessive permissions.

### Avoid Compliance Fines

Producing the required reports to satisfy auditors can be a time consuming and complex process. With Lepide, you can produce compliance-ready reports in a single click.

### Mobile App

Live Feed of changes as they happen. Designed to work on any Apple or Android enabled device. Enables you to track changes on the go.
