

Cloud-native data protection as a service

Cove Data Protection (Cove) is a cloud-native data protection as-a-service (DPaaS) solution that ensures SMBs and mid-market IT teams create data resilience through a security-first architecture.

14,000+ Customers

180,000+ Businesses protected

3M+ Microsoft 365 end users protected

Cloud backups protect your data better

- ✓ **Immutable backups:** Always-on and enabled by default, these backups cannot be altered or deleted once created
- ✓ **Rapid backups:** Our TrueDelta technology enables faster, more efficient backups that are up to 60x smaller than alternative, image-based tools
- ✓ **Worldwide cloud storage:** 30 ISO-certified data centers across 17 countries ensures geo-locked storage, helping you stay compliant with local regulations (NIST, ISO 27001, SOC1, SOC2, HIPAA, PCI)

Efficient and intuitive

- ✓ **Unified, multi-tenant dashboard:** Protect servers, workstations, and Microsoft 365 data across all locations from a single dashboard
- ✓ **SaaS application:** No need to patch or maintain a local application server. And with our seamless interface, you can have your first backups running in minutes.
- ✓ **Robust alerting and reporting:** Real-time notifications and detailed executive summary reports keep you up-to-date and in-the-know

Secure by design

- ✓ **Reduce the attack surface:** Isolated and encrypted direct-to-cloud backups protect from cyberattacks on your local network
- ✓ **Security-first design:** Mandatory MFA, role-based access, and user action logs enforce a zero-trust environment and help you comply with local regulations and cyber-insurers
- ✓ **Anomaly detection:** Built directly into the solution and delivered as a service—for before and during a cyberattack

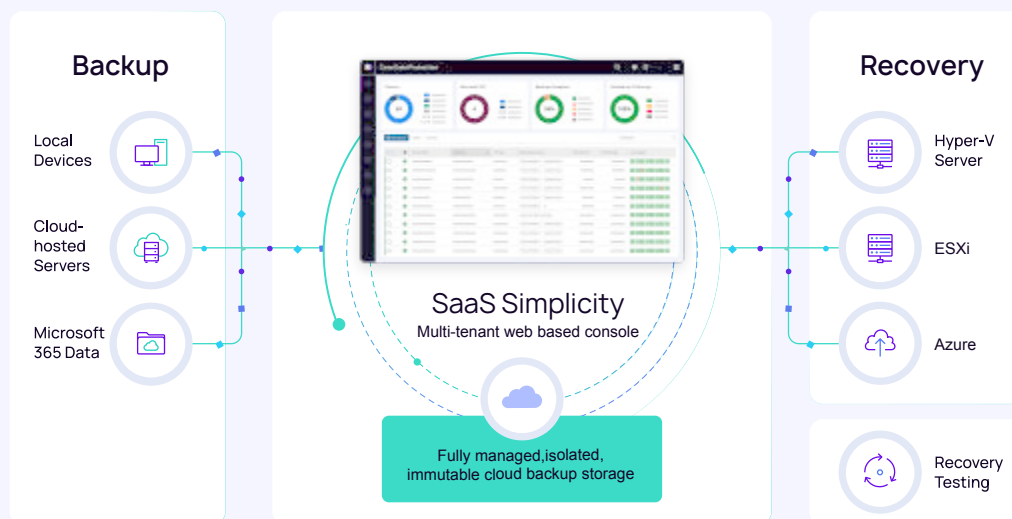

Smarter disaster recovery

- ✓ **Recovery flexibility:** File and folder, full system-state, bare-metal, dissimilar hardware or virtual disaster recovery allows you to recover the way you need
- ✓ **Standby image:** Create standby images for near instant disaster recovery either locally on your own hardware or in Microsoft Azure
- ✓ **Recovery testing:** Automate recovery testing validates the recoverability of all backups, complete with AI/ML powered boot verification

Cove Data Protection for Microsoft 365 includes Exchange™, OneDrive, SharePoint, and Teams data. Fair use policy includes up to 1TB of Microsoft 365 data per unique user.

Cloud-native architecture powered by TrueDelta technology

- ✓ **Provide yourself with smarter backups.** Our enhanced "FilesNotToBackup" registry key ignores temporary or transient data, browser caches, and similar items.
- ✓ **Process backup jobs efficiently with Cove's unique architecture.** Only sub-block-level data that has actually changed is processed. No need for the inefficiencies of full disk scanning and false positive changes introduced by defrag and file moves.
- ✓ **Transfer less data.** With a dramatically lower change rate than image backup tools, Cove's incremental backups move up to 60x less data.

Worldwide data centers

- ✓ Back up data in our private cloud with no additional price.
- ✓ Keep data in region with data centers located across five continents.
- ✓ ISO 27001, ISO 9001, and/or other certifications depending on your chosen data center.
- ✓ Simplify your billing and support by standardizing to one vendor for your backup and cloud storage needs.
- ✓ Included at no additional cost. No need to buy or manage local data storage for your backups.
