Netwrix 1Secure™

Protect data.
Secure identities.
Deploy AI with confidence.

Netwrix 1Secure™ is a SaaS platform that unifies identity and data security to eliminate the gaps that lead to breaches and data exposure.

Up and running and delivering value in an hour, it discovers sensitive data, assesses identity risks, and detects threats across hybrid environments.

With continuous monitoring and governance built for AI, 1Secure™ reduces attack surface, strengthens compliance, and enables secure Copilot adoption.

Key features

Shadow and sensitive data discovery

Identify when your sensitive data is overexposed, report on activity around it, or get alerted when someone tries to brute force their access to sensitive records.

Advanced risk assessment

Run 210+ risk checks across data and identity. Leverage PingCastle's industry-leading assessment alongside data risk analysis to systematically lower your organization's risk level.

AI-powered risk remediation

Get tailored, actionable risk remediation guidance from Netwrix AI, helping you reduce risks in your hybrid identity and data environment faster and more effectively.

Alerts on critical changes for hybrid environments

Get promptly notified about suspicious activities in your environment, so you can respond in time to prevent serious damage. Ask Netwrix Neo, the AI assistant built into Netwrix 1Secure™, what happened and get a plain-language remediation guidance, so you can fix it.

Visibility into permissions

Spot unauthorized privilege elevation with all the key facts about changes made to your security groups, including the who, what, and when details. Get alerted when high-risk permissions are added, and pinpoint overexposed data.

Protect sensitive data with sensitivity labels

Prevent data exfiltration and further enhance your data risk remediation policies by labeling sensitive data. Enhance your visibility by identifying which sensitive data is overprovisioned and if there's sensitive data that wasn't labeled.

Benefits

Find data that puts you at risk

Pinpoint where PII, PHI, and PCI live, flag users accessing files they shouldn't, and surface failed access attempts before attackers or auditors find them first.

Generate on-demand compliance reports

Cut weeks of audit prep down to seconds with prebuilt reports for HIPAA, GDPR, PCI, and SOX, plus point-in-time snapshots that show auditors exactly what changed at this moment.

See what M365 Copilot exposes

See exactly what sensitive data Copilot surfaces, to whom, and which excessive permissions it inherits. Monitor Copilot activity, so you can catch risky activity before it becomes a breach.

Set up and get results in minutes

Skip the weeks of deployment and months of waiting. Netwrix 1Secure™ runs in the cloud with no infrastructure to manage, delivering concrete risk insights in minutes.

Extend your Microsoft investment

Extend your Microsoft investment with deeper visibility into sensitive data, including MIP labels, flagging what Copilot accesses and the excessive permissions it inherits.

Mitigate risks using AI guidance

Know exactly how to fix what's wrong. AI-generated remediation steps tell you exactly how to close each finding, so your team spends time fixing, not figuring out where to start.

Spot and investigate threats

See the full data-access story, not isolated events. The Alert Dashboard shows sensitive file access, anonymous shares, risky activity, and Copilot exposure. Ask Neo, the AI assistant built into Netwrix 1Secure™, what's behind a spike and get a plain-language answer in seconds.

See AI governance risks in one place

Govern what AI can reach in one view. See total sensitive files, open-access exposure, data-type breakdown across SharePoint and Windows, and the users showing abnormal access trends.

How is Netwrix 1Secure™ different?

Delivers updates automatically

Gain instant access to new product features every month without needing lengthy upgrades, downloading packages, or applying patches.

Integrates easily in your tech stack

Keep your business workflows intact while enriching your systems with valuable information by seamlessly integrating Netwrix 1Secure™ with your professional services automation (PSA) tools.

Authenticates with single sign-on

Simplify user authentication, centralize access control, and support compliance by aligning with enterprise access management practices.

Delivers fast time to value

Find your first real exposure on day one, not after a six-week deployment. The cloud platform indexes sources as you connect them and surfaces risks in the dashboard within minutes.
