

# Netwrix Auditor

## Ease the burden of IT auditing

Automate many of the security, compliance and IT operations tasks that previously required hours to complete, so you can keep your organization secure and compliant without constantly being overburdened.

|                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                            |

## Customer feedback

“Netwrix helps us be more proactive. We can quickly catch malicious activity in the network we might not otherwise see. Our sensitive data is more secure because Netwrix enables us to know exactly where it resides and who has access to it. I don’t want to think of life without Netwrix. It makes things so much easier.”

Holly McCoy

Senior Information Systems Officer, First National Bank Minnesota

## Key features of Netwrix Auditor

### IDENTIFY SECURITY GAPS

Identify data and infrastructure security gaps, such as directly assigned permissions and inactive accounts ripe for takeover, and take corrective actions to minimize the risks of a data breach.

### DELEGATE ACCESS MANAGEMENT

Accurately enforce least privilege while freeing up your IT teams: Enable business users to make access requests for data owners to approve or deny, and empower data owners to regularly review permissions to their data.

### DETECT THREATS IN TIME TO PREVENT DAMAGE

Be the first to know about suspicious activity around your sensitive data so you can respond before you suffer data breaches and system failures or get slapped with fines for noncompliance.

### SPOT EVEN SOPHISTICATED THREATS

Spot malicious insiders and compromised accounts with a comprehensive view of all anomalous activity by individuals, ranked by cumulative risk score.

### ACCELERATE INCIDENT INVESTIGATION

In a few clicks, find the exact details you need to the bottom of an incident, resolve a user issue or respond to ad-hoc questions from auditors, whether it's all access events for a particular user or all activity related to a certain file.

### ACHIEVE AND PROVE COMPLIANCE

Prove to external and internal auditors the strength of your access controls around sensitive data wherever it resides with easy-to-digest reports.

## How is Netwrix Auditor different?

### QUICK ROI

Start getting value right out of the box and receive return on your investment in days, not months. Don't pay for expensive professional services or spend time on a lengthy deployment process.

### RESTFUL API

Integrates with other security, compliance and IT automation tools, so you can easily expand visibility to other systems and have your entire audit trail available from a single place.

### NON-INTRUSIVE ARCHITECTURE

Avoid the nightmare of intrusive agents and undocumented data collection methods.
